Vicente Pérez

Project Lead & Full-Stack Engineer | Flutter | Angular | NestJS

Venezuela (Remote) · vicenteapv1@gmail.com · linkedin.com/in/vicinf · github.com/VicInf · vicinf.github.io/portfolio

Open to full-time and contract · USD · US Eastern hours

PROFESSIONAL SUMMARY

Full-stack developer specializing in **Flutter**, with **Angular** front-end and **Node.js/NestJS** back-end experience. Three years shipping production apps for enterprise clients in oil & gas, insurance and e-learning, including a real-time fleet platform serving Chevron contractor operations. Led a two-person team; owns delivery end to end, from architecture through CI/CD to store releases.

TECHNICAL SKILLS

Quality & Delivery: CI/CD (GitHub Actions, Codemagic), Flutter unit/widget testing, Google Play releases, code review

Frontend & Mobile: Flutter, Dart, Angular, TypeScript, RxJS

Backend & Data: NestJS, Prisma, PostgreSQL, Firebase (Auth, Firestore, Realtime DB), REST APIs, OpenAPI

Architecture & Integrations: Clean Architecture, monorepos, Riverpod, Hive, Google Maps API, OneSignal

PROFESSIONAL EXPERIENCE

Project Lead & Senior Developer — July 2023 – Present
Myservy · Venezuela (Remote)

- Led a team of two (work planning, technical guidance, unblocking) to architect and deliver **Sidney**, the real-time fleet platform for a Venezuelan oil-sector contractor serving Chevron (**~300 vehicles**, **10k+ trips monthly**) across Flutter client and driver apps, web and the operations backend.
- Leading the build of **Fluye**, a commercial transactions platform (Angular + NestJS monorepo, in active development): designed the system architecture and **Service Core**, its gateway API for payments, subscriptions and workspace permissions, and authored the technical documentation.
- Shipped **Seguros Los Andes** (Flutter), a consumer insurance app for vehicle and motorcycle policies with **10k+ installs** on Google Play.
- Drove the modernization of a legacy enterprise web app from Angular 13 to 18 (now on 21): standalone components, RxJS state architecture, lazy loading and prerendering improved the **Lighthouse Performance score by 43%**.
- Cut **Google Maps API costs by 38%, saving ~$800/month** by restructuring integrations and data calls during peak fleet operations.
- Established automated unit/widget testing for the Flutter apps and CI/CD pipelines on **GitHub Actions and Codemagic**, owning mobile and web releases and production incident response.
- Delivered offline-first **Hive** synchronization between mobile clients and the backend, keeping work flowing in low-connectivity field conditions; integrated **OneSignal** push notifications across driver operations.
- Built an automated **Node.js** reporting engine (PDF/email) saving operations staff **~10 hours weekly**.

Mobile Developer — February 2025 – February 2026 · Part-time, Contract
Excuela · Peru (Remote)

- Contributed to the core state-management migration from **Provider to Riverpod** on the main **Excuela** app (**10k+ installs** on Google Play), improving modularity and maintainability.
- Owned **Excuela – La Calera**, a dedicated fork of the e-learning app (**5k+ installs** on Google Play), porting features, fixes and core updates from upstream without breaking custom implementations.

EDUCATION, CERTIFICATIONS & LANGUAGES

Degree in Systems Engineering · Universidad Santa María · 2018 – 2024

Diplomado en Ciberdefensa 101 (Cyber Defense) · Universidad Bicentenaria · In progress, expected Nov 2026

Languages: Spanish (native) · English (C2, EF SET-certified) · French (B2, DELF-certified) · Japanese (beginner)
