Vicente Pérez

Project Lead & Full-Stack Engineer — Flutter · Angular · NestJS

Venezuela (Remote) · vicenteapv1@gmail.com · linkedin.com/in/vicinf · github.com/VicInf · vicinf.github.io/portfolio

Available as USD contractor · Works US Eastern hours

PROFESSIONAL SUMMARY

Project lead and senior full-stack developer. Three years of measurable impact: **–38%** Google Maps costs (**~$800/month**), **–43%** initial load time, **~10 hours/week** of manual work automated — for enterprise clients in oil & gas, insurance and e-learning.

TECHNICAL SKILLS

Leadership & Delivery: Team leadership, end-to-end ownership, CI/CD pipelines, architecture decisions, code review

Frontend & Mobile: Flutter, Dart, Angular, TypeScript, RxJS

Backend & Data: NestJS, Prisma, PostgreSQL, Firebase (Auth, Firestore, Realtime DB), REST APIs, OpenAPI

Architecture & Quality: Clean Architecture, monorepos, Riverpod, Hive, Flutter unit/widget testing, Google Maps API, OneSignal

PROFESSIONAL EXPERIENCE

Project Lead & Senior Developer — July 2023 – Present

Myservy · Venezuela (Remote)

- Led a team of two to architect and deliver the real-time fleet platform for a Venezuelan oil-sector contractor serving Chevron and the country's major oil operators — **~300 vehicles**, **10k+ trips monthly** — across Flutter client and driver apps, web and the operations backend.
- Leading development of **Fluye**, a commercial transactions platform (Angular 22 + NestJS 11 monorepo) — OpenAPI-generated type contracts, Prisma 7 + PostgreSQL, idempotency and transactional outbox patterns — including **Service Core**, its gateway API for payments, subscriptions and workspace permissions.
- Shipped **Seguros Los Andes** (Flutter), a consumer insurance app for vehicle and motorcycle policies with **10k+ installs** on Google Play.
- Drove the modernization of a legacy enterprise web app from Angular 13 to 18 (now on 21) — standalone components, RxJS state architecture, lazy loading and prerendering cut initial load time by **43%**.
- Cut **Google Maps API costs by 38% (~$800/month)** by restructuring integrations and data calls during peak fleet operations.
- Established automated unit/widget testing for the Flutter apps and own the CI/CD pipelines powering mobile and web releases — including an agent-assisted implementation workflow gated by automated tests and mandatory code review.
- Delivered offline-first **Hive** synchronization between mobile clients and the backend, eliminating data loss in low-connectivity field conditions; integrated **OneSignal** push notifications across driver operations.
- Built an automated PDF/email reporting engine saving operations staff **~10 hours weekly**; standardized dependency management on pnpm for reproducible installs and faster CI builds.

Mobile Developer — February 2025 – February 2026 · Part-time, Contract

Excuela · Peru (Remote)

- Owned **Excuela – La Calera**, a dedicated fork of the e-learning app (**10k+ installs** on Google Play), porting features, fixes and core updates from upstream without breaking custom implementations.
- Led the core state-management migration from **Provider to Riverpod**, improving modularity and maintainability.

EDUCATION, CERTIFICATIONS & LANGUAGES

Bachelor's in Systems Engineering
Universidad Santa María · 2018 – 2024

Diplomado en Ciberdefensa 101 — Cyber Defense
Universidad Bicentenaria · Bastion 401 · In progress — expected Nov 2026

Languages
Spanish (native) · English (C2, UNIMET-certified) · French (B2, DELF-certified) · Japanese (beginner)
